Planting trees for fixing climate?

Nature-based solutions in Africa

Kdy: středa **13. března 2024** od 15.00 do 16.30

Kde: učebna **LP 5007** Přírodovědecké fakulty UP v Olomouci
(17. listopadu 12, Olomouc – 5. podlaží)

Přednáší: Dr. Karl Benediktsson

An overview of efforts in sub-Saharan Africa to use various nature-based solutions for climate change mitigation and adaptation. The talk is based on his recent experience as the coordinator of the pan-African Tree Planting and Care Initiative of the International Federation of Red Cross and Red Crescent Societies (IFRC). Many African countries and regional agencies have drawn up plans for planting trees on a large scale, as well as using other nature-based solutions to stem environmental degradation in both terrestrial and marine environments. The progress has been rather mixed so far. Some prominent challenges and possible solutions will be discussed.
